

## Introduction

the ability to learn effectively from raw text is crucial to alleviating the dependence on supervised learning

## Related Work

Semi-supervised learning for natural language has attracted significant interest . The earliest approach

## Framework

### Unsupervised pre-training

Un uses a standard language modeling objective to maximize the following likelihood:  $L_1(U) = \sum_i \log P(u_i | u_{-i})$

### Supervised fine-tuning

We perform experiments on a variety of supervised tasks including natural language inference, question

### Task-specific input transformations

previous work proposed learning task specific architectures on top of transferred representations [44] .

## Experiments

### Setup

Unsupervised pre-training We use the BooksCorpus dataset [71] for training the language model . It co

### Analysis

We observed the impact of transferring a variable number of layers from unsupervised pre-training to th

### Conclusion

generative pre-training and discriminative fine-tuning introduced a framework for achieving strong natur
